- Create UI/UX designs for Android applications

Web Developer

PT. Gold Coin Indonesia

December 2017 - January 2018

Internship

- Inventory application for warehousing needs at PT. Gold Coin Indonesia, at that time I did practical work at the company to create an inventory application

AWARDS AND ACHIEVEMENTS

ULIROTIO MAHAKARYA TEKNOLOGI

When I joined this company, I had no work experience at all, especially since I started looking for work when Indonesia was hit by Covid-19.

I also don't have experience using the Laravel framework, but my boss there trusted me because I had experience creating websites during college.

Yes, in my personal opinion, there are actually still many people who can get a web developer position in this company. So when I joined this company, I only had Native PHP and MySQL skills.

Here I succeeded in building a website-based leasing application for an office that collaborates with this company.

My job there is

- Developing the Urtimate.com website
- Developing a web-based leasing application using Laravel Lispro.id
- Converts data from various formats (DBF, Excel, ACCESS, etc.) into a database developed (SQL)
- Create a Chart of Accounts report
- Create a website with CMS Wordpress
- Create closed book reports (close book reports)
- Create UI/UX designs for Android applications

Here I got a salary increase 3 times while working. I worked there for 2 years.

Yes, that's right, I got appreciation from this company because my boss thought I was willing to learn new things and accept criticism. For me, criticism makes me much better, instead of boomeranging on myself.

Why did I stop at that company?

Armed with my 2 years of work experience and a lot of knowledge that I have gained there, I decided to look for work opportunities, in order to continue to increase my work experience.

There my task was finished, because the application I developed was already running, it just needed to be maintained.

There was resistance from my boss, why did I resign. I explained why I resigned, as I explained in the previous paragraph.

Finally my boss accepted that reason, for the sake of my career development.

Oh yes, there I worked in a total of 4 teams, 2 were my bosses, 1 was my friend [a programmer too] and the other one was me.

Until now, communication continues because I will never forget the services this company has provided to my career development.

AWARDS AND ACHIEVEMENTS

suara.com

I am one of the great people behind the success of Suara.com, which can be seen at https://www.tiktok.com/@suaradotcom/video/7210264661965507866?_r=1&_t=8doqHwpljRS

While I was at Suara.com, I had a position as a web designer, this is also the first time I got this position, because my basics were web developer.

Fiddling with CSS which I thought was easy turned out to be difficult too. I learned a lot at this company, got to know a lot of new frameworks here too, such as Tailwind CSS, SASS/SCSS.

Here I am also entrusted with full control of web design for companies such as Suara.com, Matamata.com, Hitekno.com, Bolatimes.com, Himedik.com, Guideku.com, Nexus.com, Localmediacommunity.com, Liks. Suara.com, microsite .voice.com/umkm, ikandisini.com, clickmov.com

There I often get requests to redesign the appearance of the website to keep up with the times. A new challenge because I am focused on developing the web interface and not the backend.

At this company I am increasingly interested in getting involved in the world of Web Design, because I liken web design to designing a house, starting from layout, website scale, website structure and website sections.

For about 2 years I was there, I also thought whether this company would be my last company? because I have thought about serving in this company. Here I am in control of all websites at PT. Arkadia Media Nusantara.

In September 2023 fate said differently. the company improves employee efficiency. Even though I am not part of the efficient employees, I see that this company will be unhealthy in the future. From then on I rushed to update my CV.

In December I was accepted by a well-known media company (will be discussed on the next page) and I immediately spoke with my boss.

Like in the previous company, there was resistance to me resigning, because there I was alone serving as a web designer, so when I decided to quit, that's when the company also opened recruitment to replace my position, because as I explained earlier, there I myself served as web design.

Status Resign

AWARDS AND ACHIEVEMENTS

December 2023 I will start my career at MNC Media, I am proud to be able to join the biggest media company in Indonesia.

My position is as a Web Designer, yes, just like in the previous company, I have the same position.

Finally I found my passion in the field of work, namely as Web Design.

Having a position as a web designer is like a hobby in itself, because I am given the freedom to design websites and turn those designs into website form.

Armed with my work experience at the previous company, when I was here, I already had great strength to participate in the busy work activities at this company.

Here I was assigned to create a design using Figma and then turn the design into a website. I feel comfortable working here, there is no reason why I should stop working at this company.

Assignment Information

Organization Name : Web Application Section - MNCH

CLOSING

That's all the CV and Portfolio I can write, sorry if there are words I don't understand and typos.

My goal is to make this so that people can understand what my career path is like and to apply for jobs if needed.

Yours faithfully,

Ardha Rafano Naradhipa
